

Security Risk Management – Protection of Critical Energy Sector Infrastructure

MITIGATION INTERNATIONAL

Security Risk Management – Protection of Critical Energy Sector Infrastructure

Security personnel, by nature of the job, are on the scene of an incident before any other emergency personnel. These security forces protect the property, as well as the people who visit and work there. It is their job to not only prevent situations from occurring but also to detect and deter the people who would commit those crimes in the first place. They will also be the first to respond to a situation that has occurred before any other agency of “first responders.”

Critical Infrastructure facilities such as Hospitals, Energy Sector, Airports, Train Systems, Government Buildings, Communication Systems, Defense Establishments, Financial Systems and Information Technology Systems are vital to a country’s economy and governance. Their incapacitation or destruction would have a debilitating effect on security, national economic security, national public health or safety, or any combination thereof. An attack on any critical infrastructure can also cause enormous or catastrophic damage to a country’s reputation which could take many years to recover from.

Mitigation International can assist your organisation with our fully interactive *Protection of Critical Energy Sector Infrastructure* seminars and courses which are designed to increase the awareness of security forces in terrorism, thereby increasing their ability to deter, detect, prevent, protect, and respond to potential terrorist incidents. These seminars and courses are tailored to your exact requirements and hosted by consultants with a wealth of knowledge and first-hand experience in dealing with the terrorism phenomenon within the energy sector.

“ANYTIME ANYWHERE”
