## MARITIME SECURITY SOLUTIONS

Mitigation International (MI) are experts in Maritime Ship & Port Security. All our advisors have decades of experience in Maritime Security, Counter Terrorism, Explosive Ordnance Disposal, Critical Infrastructure Protection, Training and Risk Management.

We pride ourselves in developing your maritime security teams to a very high calibre, including standards mandated by the International Maritime Organisation (IMO), in particular the International Ship & Port Facility Security (ISPS) Code. MI assists its clients (Contracting Governments/Company's) in ensuring that in accordance with the ISPS Code that an enterprise risk management approach is taken to determine what security measures are appropriate.

We will conduct thorough Port/Ship Facility Security Assessments (PFSA/SSA) to identify the actual threats to your critical assets and infrastructure in order to prioritise security measures. Our assessment will address vulnerabilities of the port facility by identifying its weaknesses that may likely be targeted, which allows us to accurately evaluate your overall risk.

In consultation with the Port Facility/Ship Security Officer (PFSO/SSO), and if required the Company Security Officer (CSO), MI can assist in writing your Port/Ship Facility Security Plan (PFSP/SSP) upon completion of the PFSA/SSA, which we ensure makes provisions for the three Security Levels, as defined in the ISPS Code.

Mitigation International's Specialist Advisors will meet with you to discuss all your Maritime Security needs for Ship and Port Facility.

We will provide you with a cost effective solution and discuss how we can provide you with the world's best standards in Maritime Security.

We pride ourselves in being the best in the business, because we have actually personally experienced first hand the difficult and challenging role of Maritime Security, especially maintaining morale amongst your staff. We have found that providing your staff with the correct tools and training is a proven method in increasing motivation, which results in your staff taking ownership of the port facility or ship they are charged to protect.

We operate in all regions of the world, with our offices based in the UK, Qatar and the Philippines. Please email or call us to discuss your Maritime Ship & Port Facility Security needs.

## Security Levels

01

Normal

the level at which ships and port facilities normally operate

02

Heightened

the level applying for as long as there is a heightened risk of a security incident

03

Exceptional

the level applying for the period of time when there is probable or imminent risk of a security incident
